PROFESSIONAL EXPERIENCE

iOS Developer, Elitesofts | 02/2026 - 09/2026

Glomi - e-commerce and services-booking platform with points, discounts, gift cards and electronic payment, built from scratch to App Store release

- Built the app from scratch across **51 screens** and their flows, and prepared and submitted **2 builds to the App Store**.
- Built the loyalty engine end to end: users earn points on spending and redeem them as discounts at checkout, with separate points, gift-card and voucher flows that each recalculate the invoice through the backend.
- Launched the gift-card feature: users buy a gift card, send it to a friend, track it and redeem it, with fully integrated electronic payment.
- Designed a reusable Alamofire networking layer with a custom interceptor that injects tokens, detects expired sessions, and refreshes and retries failed requests automatically, so users are never forced to log in again.
- Built the registration and authentication flow (login, sign-up, OTP and profile-based verification paths converging on shared screens).
- Introduced a three-layer data pipeline (API response, domain model, display model) with async/await and dependency injection, keeping networking, business logic and UI cleanly separated and easier to test.
- Fixed critical production issues, including a first-load cell-sizing race condition in Bookings, an overlapping filter bar, and a nil `professionalId` in package booking.
- Wrote Arabic architecture documentation with diagrams to speed up onboarding of new developers.

iOS Developer, Bluezone Kuwait | 10/2025 - 02/2026

BAZAR - e-commerce app | Open on the App Store

- Turned business requirements into UIKit storyboards and reusable UI components.
- Integrated third-party libraries through CocoaPods.
- Worked with the team to improve app performance and user experience.

iOS Engineer (Intern), Paymob | 07/2025 - 10/2025 | Cairo, Egypt

Paymob App - merchant payments app | Open on the App Store | Intern project code

- Integrated the Valify SDK for identity verification into merchant onboarding.
- Scaled the app with a modular architecture.
- Built and shipped production-ready features to the live app using MVVM and Clean Architecture, in an Agile team.
- Integrated REST APIs and handled JSON responses.

iOS Developer, CAT-Reloaded (Community) | 02/2023 - 10/2023 | Mansoura, Egypt

- Took part in iOS learning circles and collaborated with UI/UX and backend teams.

PROJECTS

- **Sheryan** (UIKit, Combine, MVVM) - personal blood-donation app connecting patients, hospitals and donors, with donor profiles showing blood type and contact details. GitHub
- **Music App** (UIKit) - API-based player with playlists and real-time UI updates. GitHub
- **Login Screen** (SwiftUI) and **Calculator App** (UIKit) - validation logic and clean UI handling. GitHub

EDUCATION

Bachelor of Electronics Engineering and Electrical Communications, Tanta University, Egypt | 09/2019 - 07/2024

Graduation project: Infrared and visible light wireless communication

TECHNICAL SKILLS

Languages: Swift, Python
Frameworks: SwiftUI, UIKit, Combine
Architecture: MVVM, MVVM-R, Clean Architecture, MVC
Networking: REST APIs, Alamofire, URLSession, JSON parsing, custom interceptor / auth-refresh patterns
Concurrency: async/await, dependency injection, Auto Layout, unit testing (basic)
Payments: Moyasar SDK
Tools and data: Xcode, Instruments, Git, GitHub, CoreData, Firebase

COURSES AND LANGUAGES

Hacking With Swift, 100 Days (10/2025 - 12/2025) | iOS Development, Angela Yu (05/2024 - 10/2024) | Basics of MCSA (09/2023 - 10/2023) | Basics of CCNA (03/2023 - 05/2023)

Languages: Arabic (Native), English (Proficient)
