## iOS Developer

devmohammedmad@gmail.com | +201066558707 | +201092236048

Cairo, Egypt | LinkedIn | GitHub

### SUMMARY

---

iOS Developer with hands-on, production experience building native apps end-to-end in Swift, UIKit, and SwiftUI. Comfortable owning a feature from architecture to shipping: designing MVVM and MVVM-R (Model-View-ViewModel-Router) screens, building reusable networking layers on top of Alamofire, and wiring up protocol-based dependency injection for testable, maintainable code. Experienced with async/await concurrency, Combine-based reactive bindings, and integrating third-party SDKs (payments, identity verification) into real user flows. Has worked across the full feature lifecycle — from REST API integration, JSON decoding, and state management, to debugging multi-layer architectural issues (router/coordinator chains, data propagation bugs) and writing technical documentation to support team onboarding. Strong believer in clean separation of concerns, protocol-oriented design, and writing code that's easy for the next developer to pick up.

### PROFESSIONAL EXPERIENCE

---

#### iOS Developer, Elitesofts

02/2026 – 06/2026 — Glomi (E-commerce & Booking Platform)

- Contributed to **Glomi**, an e-commerce and services-booking platform enabling users to register, book sessions, accumulate points and earn discounts based on spending, and send gift cards to friends, with fully integrated electronic payment.
- Built using the **MVVM-R** (Model-View-ViewModel-Router) architecture with **Combine** for reactive state management, interacting with a real production backend to fetch and persist data.
- Designed a reusable networking abstraction layer on top of Alamofire, including a custom interceptor that injects authentication tokens, detects expired sessions, and automatically refreshes and retries failed requests — fully transparent to the rest of the app.
- Implemented a layered data pipeline (raw API response → domain model → display model) using async/await, keeping networking, business logic, and UI cleanly separated.
- Built the registration and authentication flow, including login, sign-up, and profile-based verification paths that converge on shared screens, and the points/discount and gift-sending features end-to-end.
- Used dependency injection throughout to decouple business logic from concrete implementations, supporting easier testing and long-term maintainability.
- Authored Arabic-language technical documentation of the app's architecture, with diagrams, to support onboarding and future development.
- Managed app builds and releases, including preparing and submitting builds to the App Store.

#### iOS Developer, Bluezone

Kuwait

01/2026 – 04/2026 — BAZAR (E-commerce App)

- Worked on problem solving and analyzing business requirements.
- Designed and implemented storyboards and UI components using UIKit.
- Integrated third-party libraries using CocoaPods.
- Collaborated with the team to improve app performance and user experience.

#### iOS Engineer (Intern), Paymob

Cairo, Egypt

07/2024 – 10/2024

- Onboarded merchants and integrated Valify SDK for identity verification.
- Scaled the Paymob app using modular architecture.
- Built and shipped production-ready features using MVVM + Clean Architecture.
- Collaborated in an Agile environment to deliver high-quality releases efficiently.
- Integrated REST APIs and handled JSON responses.

#### iOS Developer, CAT-Reloaded (Community)

Mansoura, Egypt

02/2023 – 10/2023

- Participated in iOS learning circles.
- Collaborated with UI/UX & backend teams.

## EDUCATION

---

### Bachelor of Electronics Engineering and Electrical Communications, Tanta University

Tanta, Egypt

09/2019 – 07/2024

- Graduation project: Infrared & visible light wireless communication

## TECHNICAL SKILLS

---

- Languages: Swift, Python
- Architecture: MVVM, **MVVM-R**, Clean Architecture, MVC
- Frameworks: SwiftUI, UIKit, Combine
- APIs & Networking: REST APIs, **Alamofire**, URLSession, JSON Parsing, custom interceptor/auth-refresh patterns
- Concurrency & Patterns: **async/await**, **Dependency Injection (property wrappers)**, Auto Layout, Networking Fundamentals, Unit Testing (Basic)
- Payments: **Moyasar SDK integration**
- Tools: Xcode, Instruments, Git, GitHub
- Databases: CoreData, Firebase

## LANGUAGES

---

Arabic — Native | English — Proficient

## COURSES

---

- Hacking With Swift – 100 Days (10/2025 – 12/2025)
- iOS Development, Angela Yu (05/2024 – 10/2024)
- Basics of MCSA (09/2023 – 10/2023)
- Basics of CCNA (03/2023 – 05/2023)

## PROJECTS

---

- Music App (UIKit) — API-based player with playlists and real-time UI updates.
- Login Screen (SwiftUI) & Calculator App (UIKit) — smaller standalone exercises in validation logic and clean UI handling.
- Sheryan (UIKit, Combine, MVVM) — Personal project connecting patients and hospitals with blood donors; each donor has a profile screen displaying their details, blood type, and contact information.

## SOFT SKILLS

---

- Problem Solving & Analytical Thinking
- Continuous Learning
- Time Management
- Communication & Team Collaboration
- Attention to Detail
- Conflict Resolution & Constructive Communication
